Bereda Wako

Ethiopia | beriwako56@gmail.com | github.com/Bereda-maker | bereda-dev.vercel.app

Summary

Full-stack product engineer who builds complete web products from database to interface. Strongest in TypeScript, React, Next.js, PostgreSQL, practical API design, integrations, QA evidence, and deployment handoff. Based in Ethiopia and available for product, MVP, and platform work.

Relevant Experience

Full-stack product engineer 2023 — Present
Independent product work *Ethiopia / Remote*

- Shipped product-shaped workflows across education, commerce, wellness, and travel: onboarding, auth, search, content, practice, payments, messaging, progress, and administration.
- Own work across the boundary: user journeys, data models, typed APIs, responsive React interfaces, integrations, automated checks, deployment notes, and maintenance handoff.
- Scope MVPs around a measurable core loop, make integration failure states explicit, and document what is verified versus still blocked by staging, provider, or device access.

Selected Projects

Product architecture and full-stack implementation, Deborah — Education SaaS web-cdry.vercel.app | github.com/Bereda-maker/dibo

- Grade 12 learning platform with notes, question bank, topic practice, timed exams, server scoring, progress, recommendations, achievements, AI study support, provider auth, payments, and admin workflows.
- Bun workspace with Next.js App Router, Hono API, shared validation/types, Drizzle/PostgreSQL, and pure scoring/recommendation logic. Release evidence: 151 Bun tests, 15 Chromium smoke tests, type checks, and production build recorded in the repository QA report.

Frontend/backend product build, Negus Gebeya — Marketplacenegus-kappa.vercel.app | github.com/Bereda-maker/negus-gebeya-frontend | github.com/Bereda-maker/negus-gebeya-backend

- Marketplace workflow for listings, seller trust, multi-media uploads, search, favorites, messaging, orders, Chapa checkout, seller earnings, AI listing assistance, and live selling.
- Bun + Hono + TypeScript backend with MongoDB/Mongoose, Cloudinary, JWT sessions, Zod validation, WebSockets, and explicit service boundaries.

Product experience and architecture, TenaSew — Wellness platform tenasew.vercel.app | github.com/Bereda-maker/TenaSew

- Wellness content, onboarding preferences, habits, completions, progress, English/Amharic paths, and bounded non-diagnostic AI guidance.
- Next.js App Router with server-only PostgreSQL access, HTTP-only sessions, feature-oriented route handlers, architecture notes, deployment guide, and documented security gaps.

Product and web experience, EthioVista — Ethiopia travel platform ethio-vista.com | source repository not provided

- Live travel discovery surface for destinations, stays, experiences, transport, guides, trip planning, multilingual entry points, and an AI assistant marked in development.

Technical Writing and Quality

- Deborah QA release-readiness report: github.com/Bereda-maker/dibo/blob/main/docs/RELEASE_READINESS_REPORT.md
- Deborah QA test plan: github.com/Bereda-maker/dibo/blob/main/docs/QA_TEST_PLAN.md
- TenaSew architecture and deployment: github.com/Bereda-maker/TenaSew/tree/main/docs
- Core strengths: MVP scoping, TypeScript, React, Next.js, Node/Bun, Hono, PostgreSQL, Drizzle, MongoDB, REST APIs, auth, payments, AI boundaries, testing, deployment, and technical documentation.
